

# Bioenergy Production from MSW by Solid State Anaerobic Digestion (SS-AD)

**Sarina J. Ergas, PhD, PE, BCEE**  
**Daniel H. Yeh, PhD, PE, LEED AP**  
**George Dick, EI, (MSEV)**  
**Greg Hinds, EI, (MSEV)**  
**Ariane Rosario, (BSCE)**

Dept. of Civil & Environmental Engineering  
University of South Florida, Tampa, FL

Update to TAG  
March 11, 2015

# Introduction to SS-AD

- Recent increase in diversion of organic fraction of MSW (OFMSW) from landfills for separate anaerobic digestion in the US
  - Enhanced energy recovery
  - Reduced transportation costs
  - Extend landfill life
  - Decrease leachate strength
  - Reduced fugitive methane release
- Common practice in Europe

# Introduction to SS-AD

- AD environmentally superior OFMSW management method based on Life Cycle Assessments

Comparison of GHG emissions (MT CO<sub>2</sub> / MT organic waste) from various organic waste management methods

| Management Method   | Minimum | Maximum | Median | Mean         |
|---------------------|---------|---------|--------|--------------|
| Anaerobic Digestion | -0.74   | -0.06   | -0.14  | <b>-0.25</b> |
| Aerobic Composting  | -0.76   | 0.22    | 0.04   | -0.07        |
| Mass Burn WTE       | -0.24   | 0.63    | -0.02  | 0.02         |
| Home Composting     | -0.69   | 0.29    | 0.14   | 0.05         |
| LFGTE               | -0.31   | 1.00    | 0.11   | 0.16         |
| LF Flaring          | -0.06   | -0.05   | -0.06  | -0.06        |

Jeffrey Morris, S.M., Clarissa Morawski, *Review of LCAs on Organics Management Methods & Development of an Environmental Hierarchy*. 2011, Alberta Environment Edmonton, AB.

# Introduction to SS-AD

- Wet: <10% TS
  - Most common (e.g. WWTP sludge; Harvest Power Orlando )
- Semi-dry: 11-19% TS
- Solid state: >20% TS
  - No excess leachate production
  - Quicker path to stabilized soil amendment
  - Reduced cost (decreased parasitic energy loss)
  - Facilities in CA (San Jose, Monterey, Sacramento, Davis), WI (Oshkosh); others in planning, permitting, or construction phases
  - Promising for Florida because: high availability of OFMSW, warm climate, high energy demand

# Example - UW-Oshkosh

- Developed by BioFerm
- 10,000 tons of food and yard waste per year
- 3,300 MW/year
- 8% of campus electricity needs
- \$5 million total cost
- Very simple system

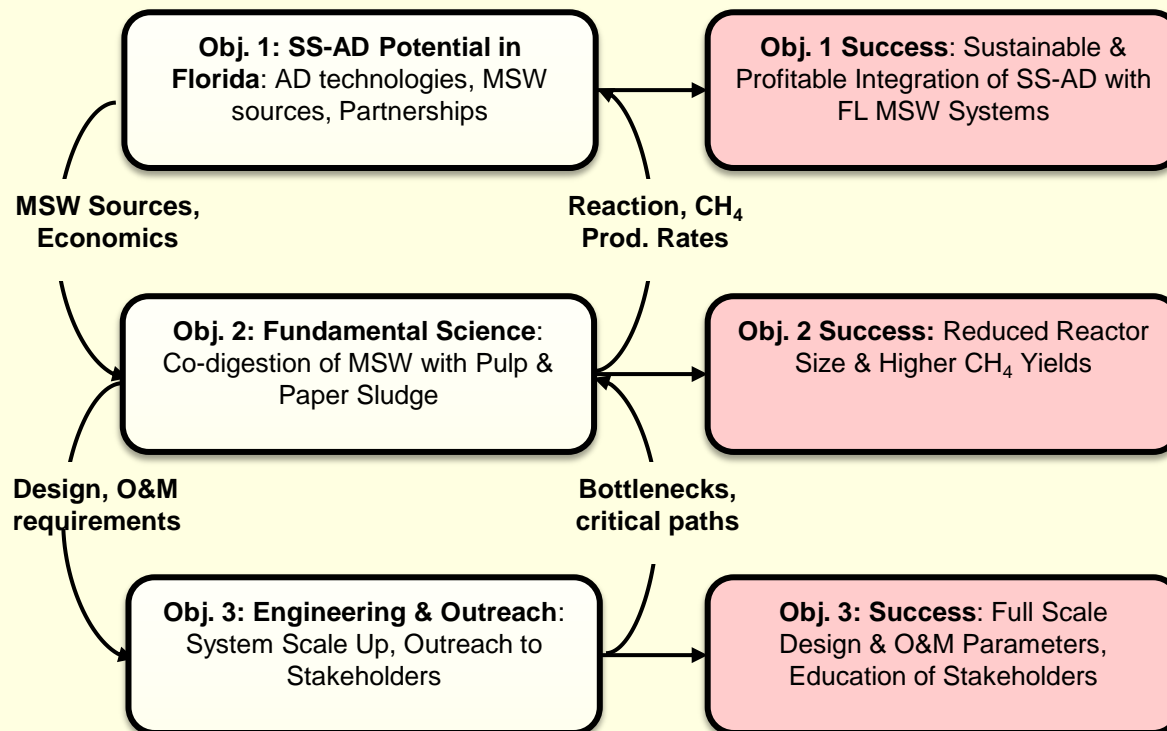

# Challenges of SS-AD

---

- Substrate collection
- Separation of comingled organic wastes
- Breakdown of lignocellulosic substrates
  - Requires pretreatment or long retention times
  - Bioaugmentation is a novel alternative
    - Pulp & Paper Mill AD sludge

# Overall Goal of Project

- To investigate the potential for biogas production in Florida from OFMSW using SS-AD

# Objective 1: SS-AD Potential in FL

## ■ AD technologies

- Many vendors emerging in the US

## ■ MSW sources

- Industry survey

## ■ Partnerships

- Utility companies?

## ■ Sustainable and profitable integration of SS-AD with FL MSW systems

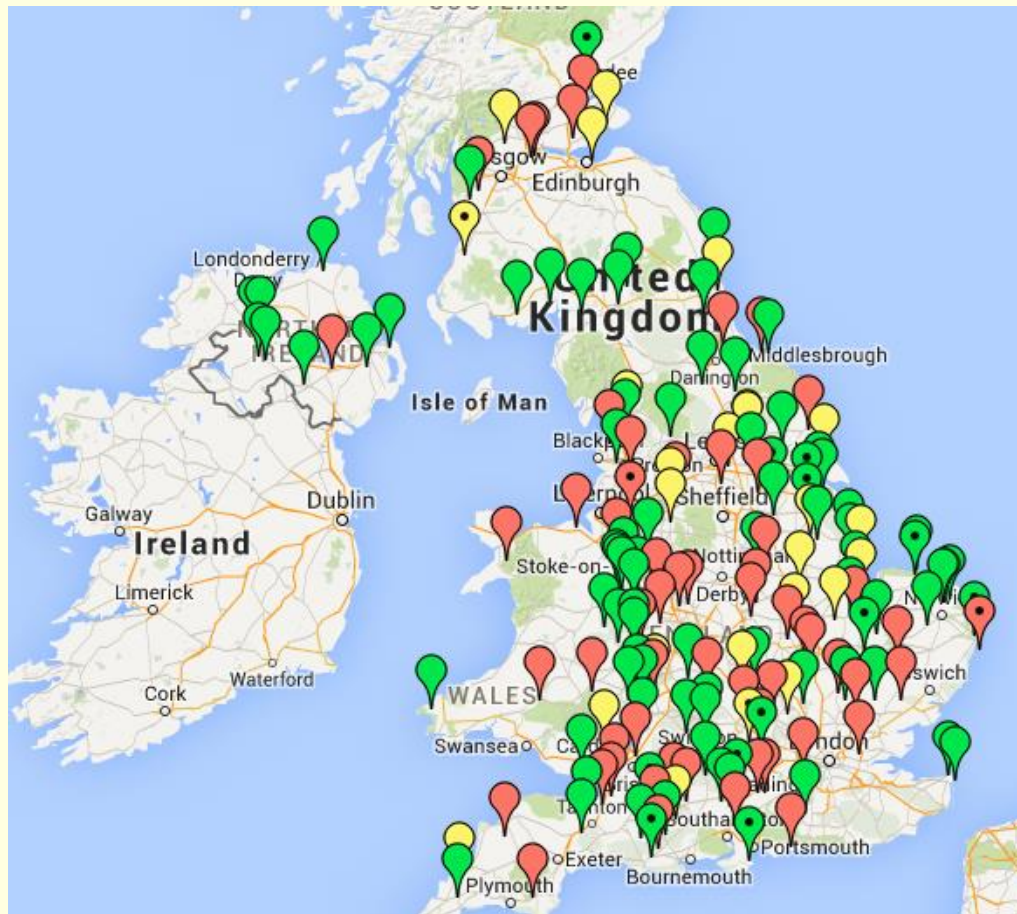

- What will it take?

# Objective 1: SS-AD Potential in FL

- OFMSW Source Map with type and generation rate similar to the UK's biogas map

Show (click to filter):

All Sites (resets the map)

Heat and/or Power (CHP) Sites

Biomethane to Grid (BtG) Sites

Agricultural (CHP) | Community (CHP) | Industrial (CHP)

Agricultural (BtG) | Community (BtG) | Industrial (BtG)

- <http://www.biogas-info.co.uk/maps/index2.htm>

# Objective 1: Questions

---

- Origin of OFMSW sources?
- Generation rates of centralized OFMSW sources?
- Potential demonstration sites?
- Scale?
- Potential funding sources?
- Policy issues?
- Biogas uses?
- Tipping fees at landfills? (~\$44 on average)
  - \*Required tipping fee for 5,000 tpy SS-AD:
    - ~\$10 (assuming 203 kWh/ton @ \$0.10 used onsite)
    - ~\$50 (assuming no electricity production)
  - \*According to pro-bono cost analysis by SCS Engineers

# Objective 2: P&P Sludge Bioaugmentation

Data from  
Dr. Wendy  
Mussoline

Methane production and specific methane yields for digesters.

|    | $L_N\text{CH}_4^a$ | $L_N\text{CH}_4/\text{kgTS}^a$ | $L_N\text{CH}_4/\text{kgVS}^a$ | $L_N\text{CH}_4/\text{kgCOD}^a$ |

| C3 | 0.183              | 41                             | 46                             | 43                              |
| D1 | 0                  | 0                              | 0                              | 0                               |
| D2 | 1.351              | 301                            | 340                            | 314                             |
| D3 | 1.332              | 296                            | 335                            | 310                             |
| D4 | 1.198              | 267                            | 302                            | 279                             |

<sup>a</sup> The values in this table represent methane produced from rice straw only (gas produced from sludge blanks (i.e. D1-b to D4-b) have been subtracted).

# Objective 2: Preliminary Research Questions

---

- 1) Does inoculation with P&P sludge enhance biogas production from yard waste in SS-AD?
  - To what degree?
  - How does it compare with other pretreatment methods?
  - Can enhancement be achieved through digestate recycle?
  - What other inoculum sources enhance lignocellulosic biodegradation?
- 2) What codigestion strategies provide a sustainable approach for Florida MSW facilities (e.g. various combinations and ratios of yard waste, food waste, and biosolids)?
  - Trade-offs between substrate collection and processing and bioenergy production?

# Objective 2: Research Question 1 - Methods

- 3 'mixtures' M1) YW + AD  
M2) YW + P&P  
M3) YW + P&P + AD
- BMP Assays modified from Owens, 1993
  - 20% Total Solids
  - Inverted 3M, NaOH
  - Mesophilic conditions (35 °C)
  - Done in triplicate with 1 intermediate
  - Blanks to adjust methane yields
- Measure:
  - Gas production measured over 60 days
  - pH, alk., TN, TAN, COD, & VFA
  - Heavy metals in digestate – not yet determined
- Compare methane production (Total and Adjusted: L CH<sub>4</sub>/kg VS)

# Objective 2: Research Question 1 - Methods

- AD –Howard F. Curren Advanced Wastewater Treatment Plant
- P&P – Pulp and paper mill in Eerbeek, Netherlands
- YW – Yard waste from USF
  - sieve to a maximum particle size of one square centimeter

**Digester Compositions**

# Objective 2: Research Question 1 – Results

## ■ Results from chemical analyses

|                                  | pH  | Alk. (mg/L) | COD (mg/L) | TN (mg/L) | TAN (mg/L) | VFA (mg/L) |
|----------------------------------|-----|-------------|------------|-----------|------------|------------|
| <i>Raw Mixtures</i>              |     |             |            |           |            |            |
| M1 (P&P + AD)                    | 6.9 | 180         | 2200       | 160       | 78         | 1000       |
| M2 (P&P)                         | 7.1 | 240         | 2400       | 120       | 62         | <b>710</b> |
| M3 (AD)                          | 7.4 | 420         | 1500       | 170       | 100        | 760        |
| <i>Final Digestate (60 days)</i> |     |             |            |           |            |            |
| M1 (P&P + AD)                    | 8.2 | 3900        | 4300       | 410       | 440        | 790        |
| M2 (P&P)                         | 8.1 | 3300        | 3500       | 490       | 360        | <b>730</b> |
| M3 (AD)                          | 8.1 | 2700        | 1800       | 230       | 250        | 510        |

- Ammonia inhibition concentration = ~2,500 mg/L
- VFA decrease = acetogenesis is outpacing hydrolysis; hydrolysis is limiting
- VFA increase = hydrolysis is outpacing acetogenesis; hydrolysis is not limiting

# Objective 2: Research Question 1 - Discussion

Zheng Y., Zhao J., Xu F., Li Y. 2014. Pretreatment of lignocellulosic biomass for enhanced biogas production. Prog Combust Sci; 42: 35-53

| Biological pretreatment | Results   | Feedstocks   |
|-------------------------|---|--|
| Fungal pretreatment     | 15% to 5 folds increase of methane yield                          | <ul style="list-style-type: none"><li>• Agricultural residuals: sweet chestnut leaves/hay and sisal leaf decortications residue (SLDR)</li><li>• Hardwood: Japanese cedar wood chip</li></ul>          |
| Microbial consortium    | Methane yield improvement by 25–96.63%                            | <ul style="list-style-type: none"><li>• Agricultural residuals: corn straw, corn stalks, cotton stalks, cassava residues, and manure biofibers</li></ul>   |
| Enzymatic pretreatment  | 0–34% increase of methane yield                                   | <ul style="list-style-type: none"><li>• Agricultural residuals: Sugar beet pulp, spent hops, and manure biofibers</li><li>• MSW: pulp and paper sludge</li><li>• Grass: jost tall wheatgrass</li></ul> |
| Ensilaging              | 15% increase of methane yield, but negative effect was also found | <ul style="list-style-type: none"><li>• Agricultural residuals: maize</li></ul>  |

# Objective 3: Engineering and Outreach

## ■ System scale-up

- Pilot system constructed
- SS-AD at USF
  - Conducting feasibility study and LCA for SS-AD at USF with interdisciplinary team for reapplication to SGEF

## ■ Outreach to Stakeholders

- *Talking Trash* spring newsletter article
- Proposal submitted to *Biocycle*

## ■ Education of stakeholders

- Abstract submitted to WASTECON
- Engineering EXPO demonstrations
- Poster presentations
  - AEESP Lecture at UCF, USF Research Symposium, Presenting at NAWTEC and USF Undergrad Research Colloquium

# Objective 3: Engineering and Outreach

---

# Questions, comments?

---

*Thank you TAG and Sponsors*

# Objective 1: Questions

---

- Origin of OFMSW sources?
- Generation rates of centralized OFMSW sources?
- Potential demonstration sites?
- Scale?
- Potential funding sources?
- Policy issues?
- Biogas uses?
- Other challenges?

# DRANCO (Belgium)

- No internal mixing
- 30 – 40% solids
- Mixing outside the tank with digestate (up-to 1:6)
- Extremely simple - reliable

# Kompogas (Switzerland)

- Horizontal steel reactors
- Slowly rotating axial mixers (mixing, moving solids towards output, degassing)
- 23 – 28% solids
- Feed stream mixed with recycled digestate

# Valorga (Germany/France)

- Plug-flow Improved by concrete baffle
- 25 – 35% total solids

- Mixing by high-pressure biogas
- Inoculation with finished product is not necessary

# BioFerm Batch Reactors – Garage Type

- **Simple!**
- Minimum maintenance
- Low energy losses
- Minimum capital costs
- Used especially for small farms (economy important)
- Inoculation with leachate (percolate)
- Drawback - low process control (no mixing)

- Typically 30 – 40% solids
- Gas-tight container/room with gas tight door
- Loading by wheel loader
- Need to evacuate oxygen at the start (explosive)
- Inoculation with digestate (only 1/3 exchanged for each batch)
- Retention time around 90 days

# UC Davis – Food and Yard Waste

- Invented by UC Davis Professor
- 50 ton per day capacity
- 1 MW
- Reduce loading to landfills by 20,000 tons/year
- Reduce GHG emissions by 13,500 tons/year
- 4 million gallons of low cost fertilizer and soil amendments/year

# San Jose, CA – Food and Yard Waste

## Zero Waste Energy

- +San Jose, CA
- +90,000 tons/year
- +1.6 MW electricity + CHP
- +Digested Material: high quality compost
- +Phase 2 completed
- +Phase 3: Turning residential food waste into biogas for vehicles

# Sacramento, CA – Food Waste

## Sacramento, CA

- +Awarded International Bioenergy Project of the Year (2013)
- +40,000 tons/year of food waste
- +700,000/year diesel gallon equivalents of renewable CNG
- +fueling Atlas waste haulers and city vehicles

# Progress in California

| Project Name                                 | City or County      | Feedstocks                                      | Digestion Type        | Status        |
|--|---------------------|---|-----------------------|---------------|
| East Bay Municipal Utilities District        | Oakland             | Food, Biosolids, & fats, oils, and grease       | Wet                   | Operational   |
| Inland Empire Utilities Agency - Environ     | Chino               | Food Waste                                      | Wet                   | Operational   |
| Monterey Zero Waste Energy                   | Marina              | Green and Food waste                            | Dry                   | Operational   |
| Sacramento Regional Sanitation               | Elk Grove           | Food waste, Biosolids, & fats, oils, and grease | Wet                   | Operational   |
| Clean World - American River Packaging       | Sacramento          | Food Waste, cardboard & other                   | High Solids           | Operational   |
| Kroger/Ralphs - Compton Distribution Center  | Compton             | Food Waste                                      | Wet                   | Operational   |
| Central Marin Food to Energy                 | San Rafael          | Food Waste                                      | Wet                   | Operational   |
| Clean World - Sacramento Digester            | Sacramento          | Green and Food waste                            | High Solids           | Operational   |
| Zero Waste Energy Development                | San Jose            | Green and Food waste                            | Dry                   | Operational   |
| North State Rendering                        | Oroville            | Agricultural, food waste and grease             | Wet                   | Operational   |
| Los Angeles Sanitation Districts AD Pilot    | Carson              | Food waste & Biosolids                          | Wet                   | Operational   |
| UC Davis Renewable Energy Anaerobic Digester | Davis               | Green and Food waste & manure                   | High Solids           | Operational   |
| Blue Line Zero Waste Energy                  | South San Francisco | Green and Food waste                            | Dry                   | Commissioning |
| CR&R Material Recovery Facility              | Perris              | Green and Food waste and MRF Residuals          | High Solids Plug-flow | Construction  |

# Hartford, CT - Food and Yard Waste

## Central Connecticut Organics Recycling Facility

- +Near Hartford, CT
- +75,000 tons/year of municipal and commercial organics (Food, yard and woody waste)
- +16 municipalities contributing
- + 1.4 MW + CHP
- +Digested Material: high quality compost and engineered soil products
- +Construction: late 2014
- +Commissioning: late 2015

# Digestate from SS-AD

- Concern – heavy metals...

# Wet-AD in Florida

- WWTP Sludge (Biosolids)
- Harvest Energy in Orlando

## Harvest Energy Garden

+130,000 tons per year of biosolids, fats, oils, grease, and food waste—mostly from Walt Disney Resorts and hotels  
+3.2 MW of installed power generation  
+2.2 MW of recoverable heat  
+Digested material: class AA granular fertilizer and phosphorous-rich Struvite sold as a fertilizer additive

# Recent Legislation

- Florida Legislature enacted House Bill 7135 (2008) - established a new statewide recycling goal of 75% to be achieved by the year 2020.
- Examples of legislation for food waste recycling:

**Municipalities:** San Francisco, Seattle, Austin, Vancouver, New York City, most starting in 2009-10

**2011:** CT, Public Act 11-217 (updated in 2013)

**2012:** VT, Universal Recycling Law, Act 148—all organics, largest generators first, effective 7/1/2016

## 2013

- CT: Public Act 13-285 (update to 2011)—Commercial organics, **effective 1/1/14**
- NYC: Local Law 146-2013—Commercial organics, effective 7/1/2015

## 2014

- MA: 310 CMR 19.000 regulations—Commercial organics, effective 10/1/14
- RI: An Act Relating to Health and Safety—Commercial organics, effective 1/1/2016
- CA AB 1826: *Mandatory Commercial Food Waste Recycling (awaiting Gov's signature)*
- MD: *Composting and Anaerobic Digestion Facilities-Yard Waste and Food Residuals (pending)*

# Year 2 (projected)

---

- Design, construct and operate a continuously-fed demonstration SS-AD
  - USF campus (Botanical Garden), or
  - Hillsborough County solid waste facilities
    - South County Landfill
    - Yard waste processing centers
- Life cycle assessment (LCA) and Life cycle cost analysis (LCCA)
  - Cradle-to-gate
  - MSW processing, transportation, conversion
- Evaluate Developing World Application
